No. DGH/NDR/Data Submission/2022/01

21st March 2022

Sub: Data submission to NDR in hard Disk

National Data Repository is receiving E&P data from operators and other agencies working in Indian sedimentary basins in various media like cartridges (IBM 3592), LTOs, DVDs etc. All these media types are slow, belong to different generations, require specific devices for read/write and are getting outdated. NDR has to invest considerable time for data retrieval from these media types due to which QC of submitted data and subsequent upload in data server is delayed.

It is requested that all operators and entities submitting E&P data to NDR/DGH henceforth submit data in USB 3.0 or higher hard disk(s) of latest generation. More specifically, geoscientific data like well data and all field/pre-stack/post-stack seismic 2D/3D/4D data must also be submitted in the hard disks only. The formats of various data submission will remain the same as provided in data submission guidelines published/communicated earlier.

This has the approval of competent authority.
